Zurich, October 13th, 2016 / WIANN

KOZLOVA Oxana (born 24.11.1982) and MATYUSHCHENKO Zlata (born 01.03.2016)
Novo Alekseevskaya street, 18-1-15, 129626 Moscow, Russia

The "Zurich Center for Fetal Diagnosis and Therapy" (jointly run by the University Hospital Zurich and the University Children's Hospital Zurich) is one of the few centers worldwide to offer open fetal surgery on the unborn child. This highly specialized and innovative technique is mainly used to repair Spina bifida, also called Myelomeningocele. Mrs. Kozlova was diagnosed with a fetus that suffers from Spina bifida (myelomeningocele). Spina bifida is a severe malformation of brain and spinal cord that usually leads to many serious irreversible and lifelong handicaps. The most efficacious therapy today is **fetal surgery**, i.e. an operation *before* birth. This innovative in utero intervention significantly improves the prognosis for these patients in that the above mentioned handicaps can be avoided or at least be ameliorated markedly. As this in utero treatment is not on offer in Russia, we naturally do also treat patients from Russia.

Mrs. Kozlova underwent the open fetal surgery in Zurich in January this year and her daughter Zlata was born on March 1st 2016.

The following pages show a detailed cost overview for both patients Oxana Kozlova (mother) and Zlata Matyushchenko (daughter). Please note the costs are calculated on the basis of our Swiss DRG-System (Diagnosis-Related-Groups). This DRG-System produces a cost weight for an individual condition and the cost weight is then multiplied by the hospital specific base rate and this finally produces total costs. Therefore it is difficult to give a precise breakdown of costs.

Sincerely yours

Prof. Martin Meuli, MD

Surgeon-in-Chief
Chairman Department of Pediatric Surgery
University Children's Hospital Zurich
Co-Director Center for Fetal Diagnosis and Therapy University of Zurich Medical School
Full Professor of Pediatric Surgery, University of Zurich Medical School.
